About us

In fact, it is a thinking and a tool that designs and makes visible the third level, that is, the level of knowledge, for you. Of course, from all the information that is created throughout your organization, from human resources to transportation and accounting, etc. It examines the information obtained from throughout the organization, filters it, removes unreliable information or so-called dirty information, and creates graphs from the correct information of the organization that will allow you to understand the current situation at a glance. Once the current situation is clear, you can ask for deeper and more fundamental information from business intelligence, which will ultimately lead to a deep understanding of what is happening, and again, based on the knowledge obtained from business intelligence, you will make decisions and develop strategies.

Advantages of the system over similar systems

Security

One of the differences between this system and similar systems is its extremely powerful security system. Despite this powerful and permanently online security system, managers can always be aware of the exact location of the bicycles with the dashboard of this system.

Ease

Gity System Shargh Company has greatly simplified the use of the system by placing all processes online, so that people can rent a bicycle with a smartphone in hand and lock the bicycle in the designated areas after completing the trip.

System goals

Citizens' health

Besides being a form of recreation, cycling is also considered a very useful sport that contributes significantly to the health of citizens.

Entertainments

In addition to its many benefits, cycling is also a very refreshing and enjoyable pastime that has a direct impact on the mental health of city residents.

Cultural promotion

Using bicycles in the city first and foremost makes a city more beautiful and increases its value, and also helps to develop the general culture of the people.

Economic

In this system, people can use bicycles throughout the city for a small fee. This amount can be a good source of finance for the city in the long run.

Reducing air pollution

Using a bicycle is one of the best ways to reduce air pollution, as evidenced by the use of this method by advanced countries such as Japan and China.

Integrated system
