About Us

With business intelligence, no opportunity or threat will remain hidden. Business intelligence changes the way you look at business.

With business intelligence, no opportunity or threat will remain hidden. Business intelligence changes the way you look at business.

Today, it is impossible to find an organization that is less dependent on business intelligence and its tools than on any of the organization's components alone. The path is clear when there is enough light to distinguish the lost. The road is suitable for traveling when there are enough warning and guidance signs installed on it. And business intelligence gives you these signs.

In fact, it is a thinking and a tool that designs and makes visible the third level, that is, the level of knowledge, for you. Of course, from all the information that is created throughout your organization, from human resources to transportation and accounting, etc. It examines the information obtained from throughout the organization, filters it, removes unreliable information or so-called dirty information, and creates graphs from the correct information of the organization that will allow you to understand the current situation at a glance. Once the current situation is clear, you can ask business intelligence for deeper and more fundamental information, which will ultimately lead to a deep understanding of what is happening and, again, you will make decisions and develop strategies based on the knowledge gained from business intelligence.

Your payment is not intended to be non-refundable.

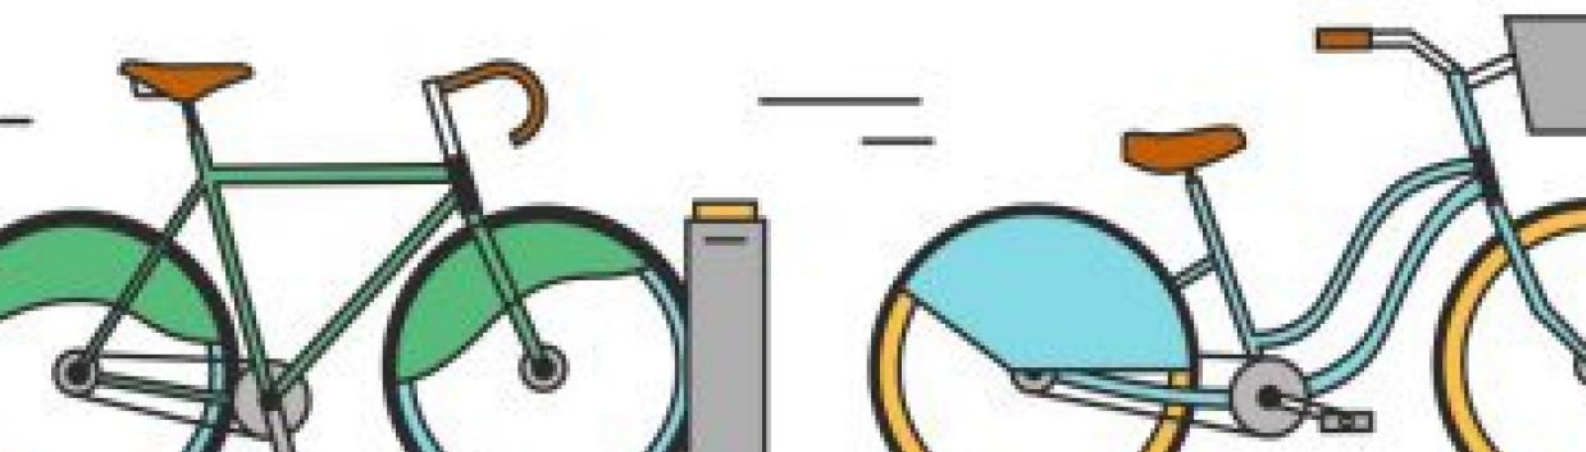

BI empowers you as an analyst and strategist to perform fundamental analyses with less computational error. It can easily improve your decision-making power several times over, with a low percentage of errors resulting from not having access to the right information at the same time.

System Introduction

The bike sharing system is one of the best environmentally friendly systems that helps preserve the health of the earth, people, and individual culture by promoting a cycling culture.

BIKE SHARING

Cycling is a guarantee of healthy air, healthy culture, and a healthy body. Let's have a prosperous country by cycling and promoting that culture.

Cycling in the city

has many benefits and advantages, which is why in many advanced cities around the world, great emphasis is placed on the use of bicycles by citizens, and suitable conditions for cycling have been provided. Today, developed societies have fully realized that the way to get rid of pollution and global warming, air pollution, as well as the excessive waste of time and energy caused by traffic is to use clean and pollution-free vehicles. Especially considering the increasing pace of life in today's modern world and the neglect of most people in urban communities about their health and lack of sufficient exercise, cycling as a sport will ensure people's health in the long term. For this reason, in many societies, providing infrastructure for cycling in cities is a necessity, and many efforts are made to allocate sufficient funds and funds to provide this means of transport to ordinary citizens and to create a culture of bicycle use.

System Goals

There are various reasons and goals for using a bike sharing system, which are mentioned below. Bike sharing can be used as a free or cheap transportation system for short distances. It can be used as a complement to conventional transportation systems such as buses and urban trains, and the user can use a bicycle to reach the nearest stations or routes. The use of bicycles reduces visual, noise and air pollution, which are the main problems of all metropolises in the world.

Reducing air pollution

Using a bicycle is one of the best ways to reduce air pollution, as evidenced by the use of this method by advanced countries such as Japan and China.

Entertainments

In addition to its many benefits, cycling is also a very refreshing and enjoyable pastime that has a direct impact on the mental health of city residents.

Economic

In this system, people can use bicycles throughout the city for a small fee. This amount can be a good source of finance for the city in the long run.

Health of citizens

Besides being a form of recreation, cycling is also considered a very useful sport that contributes significantly to the health of citizens.

Cultural Promotion

Using bicycles in the city first and foremost makes a city more beautiful and increases its value, and also helps to develop the general culture of the people.

Advantages of the **system** over similar systems

Security

One of the differences between this system and similar systems is its extremely powerful security system. Despite this powerful and permanently online security system, administrators can always be aware of the exact location of the bicycles with the dashboard of this system. If a bicycle leaves the designated border, you will be immediately warned and you can take the necessary measures and return the bicycle while being aware of the location of the bicycle.

Other advantages of this system include using the latest technology, connecting bicycles to the server at the same time, monitoring and a very powerful dashboard, and not requiring human resources. Meanwhile, managers can be informed about all current network information very accurately and quickly by having up-to-date reports in hand, which is a great help in making correct and timely decisions for the managers of the complex.

Ease

By putting all the processes of the system online, Giti System Shargh has greatly simplified its use, so that people can rent a bicycle with a smartphone and lock the bicycle in the designated areas after completing the trip. It goes without saying that using the system does not require any people and is done completely online.

The shared bike system, along with being safe and easy to use, has a very high capacity, which does not experience any slowdowns or disruptions even when used simultaneously by several thousand users, making it an enjoyable experience for citizens.

Good Taste of Technology

Improving the quantity and quality of public transport, promoting cycling and walking. These are the most important goals that, according to the Washington Post, the British national campaign in 1997 by the Environmental Transport Association for Car-Free Day, which has become a global day, was developed and designed.
